

Excel Project (Interactive Dashboard)

Project steps: —

- ① Business Requirement Gathering
↓
- ② Understanding of data
↓
- ③ Data connection (Import data using Power Query)
↓
- ④ Data cleaning and Data Quality (check using Power Query)
↓
- ⑤ creating calendar Table (using Power Query)
↓
- ⑥ Data Modelling — Power Pivot (Relationship b/w Tables)
↓
- ⑦ Adding Required columns (DAX calculation in Power Pivot)
↓
- ⑧ creating pivots and Dashboard layouting
↓
- ⑨ charts Development and formatting
↓
- ⑩ Dashboard / Report Development
↓
- ⑪ Insights Generations

+ Purpose of the Project:

We need to create a Hospital Emergency Room Analysis Dashboard in Excel to improve efficiency and provide useful insights.

This dashboard will help stakeholders to monitor, analyze and make better decisions for managing patients and improving services.

KPI'S Requirements

(Key Performing Index)

• Number of Patients:-

count the total no. of Patients visiting the ER Each day.

Show a daily trend with an area sparkline to spot patterns like busy days or seasonal trends.

• Average wait Time:-

Find the average time patients wait to see a medical professional.

Use an area sparkline to track daily changes and highlights days with longer wait times that might need improvements.

- Patient satisfaction score: -

Check the average daily satisfaction score of patients to assess service quality. Use an area sparkline to show trends, spots drops in satisfaction, and link them. challenges.

* charts to create :

- Patient Admission status
Shows how many patients were admitted vs not admitted.
- Patient Age Distribution
Group patient by Age
- Timeliness
Measure the percentage of patients seen within 30 minutes.
- Gender Analysis
Display the number of patients by Gender.
- Department Referrals
check which departments patient are referred to the most

isme ctrl + 2 or 9

power of very (Transform data)

① ☒ Column Quality	valid	100%
	Error	0
	Empty	0

② Right click (select c_1 & c_2) merged (delimiter)

③ select (C) → Rightclick — Replace 

☒ Match entire cell

Boolean value TRUE / FALSE

↳ direct Replace $\forall$ $\exists$

↳ पढ़ें उसकी Text $\rightarrow$ convert

Split column — Delimeter

List of dates of ~~the~~ Power Query - Blank

Req. calculation

List Dates (date(—), weekday, # — ())
